

## ERECTION OF 22" RUBBISH CHUTES

Rubbish chute

Our rubbish chutes are manufactured from High Density Polyethylene to give superior abrasion resistance and are fitted with 4mm carbon steel wires and U Bolts which are tested to breaking load of 1240kg

Top hopper

The chute system should always start with a top hopper and the wires **MUST HANG UPWARDS**. The wire's must be attached to a suitable structure. Top hoppers feature a wide open top which act as a guard against falling debris

Side entry hopper

Chutes with side entries should always keep a vertical and free hanging chute run. Side-Entry hopper sections fit into your rubbish chute system allowing workers to dispose of rubbish down the chute at different level of the scaffolding.
